

Oil and Gas

The Opting Solution Team is made up of experts in thermodynamics, chemistry and industrial processes. It is equipped to offer innovative environmental solutions specifically tailored to the oil and gas industry.

Opting designs and supplies systems for the treatment and recovery of solids, gas filtration and separation systems as well as effluent treatment and valorization systems. It also offers solutions for the minimizing and revalorization of process water.

OUR SOLUTIONS ALLOW:

- A reduction in energy costs;
- A reduction in process water consumption;
- The reduction, treatment and revalorization of effluent at low costs;
- An increase in available space due to compact footprints;
- The decontamination of soils;
- The separation and revalorization of used oils;

THE TYPES OF MANDATES THAT WE CARRY OUT INCLUDE:

- Separation and treatment of gaseous effluents;
- Revalorization of sludge and other industrial by-products;
- Treatment of wastewater and other effluents;
- Soil treatment and remediation;
- Upgrading or optimizing existing equipment;
- Automation and performance tracking;
- Assistance throughout grant application processes;
- Pre-feasibility and feasibility studies;
- Basic and detailed engineering;
